

# Quarterly Report For Financial Period Ended 31 March 2024

#### MARKET REVIEW

The Fund entered the first quarter of 2024 with expectations of low recession risk, interest rate cuts, and looser monetary conditions in the year ahead. The expectations were based on falling United States (US) inflation rates, the US interest rate futures market indicated cuts in interest rates later in 2024 and 2025. We expect Malaysia to follow the global rate-cut cycle if this materialises.

We had expected the rate cuts in the US to be more pronounced compared to the rest of the world. As such, we expect this will eventually lead to sharper US Dollar ("USD") declines against Asian currencies. Relatively stronger Asian currencies which will bring foreign fund flows into the region and Malaysia.

The above materialised, when the US kept its policy rate at 5.25% at the March 2024 meeting and indicated three quarter-percentage point cuts by the end of 2024. The last time the US cut rates was four years ago, when the COVID-19 pandemic hit.

We also expected further upside catalysts for equities, driven by the uptick in the global semiconductor cycle, falling bond yields, and domestic policies that favour the power (e.g. New Energy Transmission), property (e.g. Iskandar Special Economic Zone), and infrastructure (e.g. Mass Rail Transit 3) sectors. Rallies were relatively broad-based, with eleven out of 13 key Bursa Malaysia sectors gaining. The utilities (+77%), property (+57%), and construction (+46%) generated the highest returns compared to the first three months of 2023. Foreign fund inflows were positive for two out of three months.

The Fund's positioning benefitted from the above and outperformed the benchmark during the quarter.

#### MARKET OUTLOOK

Our market outlook for the second quarter is unchanged from the first quarter. We maintain the view that the end of the US rate hike cycle will be positive for Asian currencies, as the USD weakens. This view is positive for gold mining, jeweller, and technology companies that also distribute dividends.

Nonetheless, we look towards the year 2024, with expectations that interest rates have already peaked, or are close to peaking. The US Treasury yield curve has the potential to fall, with a bull-flattening bias. As such, we position the fund's holdings in sectors and beneficiaries of falling interest rates and bond yields, and weaker US Dollar against Asian currencies.

In addition, the Fund is currently focused on the metals and agriculture commodity equities. We noted three emerging catalysts: Firstly, global tin prices have surged due to tin closed mines in Myanmar and constraints in Indonesian exports that may see a 5,000-tonne tin deficit in 2024 from a 6,000-tonne surplus in 2023. Secondly, gold prices surged to a record high although the US Federal Reserve (Fed) left interest rates unchanged. The high gold prices were in anticipation of lower interest rates going forward (weaker US Dollar) elevated inflation and geopolitical tensions in the Middle East and Ukraine. Thirdly, crude palm oil prices hit 12-month highs due to stagnating production and higher biodiesel mandates. Unfavourable weather conditions added to supply tightness.

The Fund is invested in beneficiaries of higher commodity prices. Equity holdings in these beneficiaries are typically non-index linked and have a combination of growth and dividend drivers. Their low valuations and dividend prospects add to the upside potential from the above catalysts.
