

Quarterly Report For Financial Period Ended 30 September 2024

### MARKET REVIEW

The fund recorded a -2.9% performance for the quarter. This trailed the benchmark which has rose by 1.9%. Despite the recent volatility, we maintain a positive outlook on equity markets. Investors are concerned about the potential for a rapid slowdown in the US economy. While growth has indeed moderated, we do not anticipate the US entering a recession for now. Consensus forecasts project US GDP growth to remain positive in both 3Q and 4Q (Bloomberg estimates: 2.3% and 1.8%, respectively). Lowering US interest rates should provide support for equity markets. The Fed cut the federal funds rate (FFR) by 50 bps on 18 September 2024 and may further reduce it by year-end. Should the Fed implement 25 bps cuts at each meeting in the next 12M, the FFR could decline to 3.0% by 2H25, weakening the USD and benefiting EM currencies. Historically, a weaker USD will drive flows to EM including Asia. Furthermore, EM markets like Malaysia have often done well after the Fed cut rates.

For the first time in years, Malaysia appears to be benefiting from a convergence of positive factors. The MYR has appreciated by 11% against the USD since April 2024. On top of that, the Madani government has directed Government-Linked Investment Companies (GLICs) to prioritize domestic investments, resulting in both local and foreign funds being net buyers in 2024. The Ministry of Finance has announced that six leading GLICs will invest RM120 billion in direct domestic projects over the next five years. Additionally, civil servants are set to receive a salary increase of 7% to 15% starting from 1 December 2024.

### MARKET OUTLOOK

These developments add to other favorable factors including a potential recovery in semiconductor exports, supply chain diversification away from China, strong foreign direct investments (FDI), improved relations with Singapore (such as the Johor-Singapore Special Economic Zone and the Kuala Lumpur-Singapore High-Speed Rail), data centre investments, renewable energy initiatives, and plans under the National Semiconductor Strategy.

We increased our exposure to Singapore slightly as we are positive on Singapore banks due to their dividend yields and exposure in non-interest income, treasury revenue and better asset management contribution as interest rates fall.

Malaysia's market valuations remain reasonable with a 2024 PER of 15.2x (10-year range: 12.4x to 21.7x), PBR of 1.4x (10-year range: 1.1x to 2.2x) and a forecast dividend yield of 4.1% for 2024 (10-year range: 2.7% to 5.3%). Our strategy focuses on investing in well-managed companies that offer potential catalysts, growth, and/or attractive dividend yields. We believe the market has the potential to rise in the coming months.
